Groundwater Monitoring Data Summary Report
Third Quarter, 1994
K/J 944016.00

Kennedy/Jenks Consultants is pleased to submit this Groundwater Monitoring Data Summary Report, Third Quarter, 1994, for the Douglas Aircraft Company C-6 Facility located at 19503 South Normandie Avenue, Torrance, California. This report was prepared to fulfill quarterly groundwater quality monitoring as required by the California Regional Water Quality Control Board - Los Angeles Region in correspondence dated 7 April 1992.

If you have any questions, please do not hesitate to call us at (714) 261-1577.

Very truly yours,

KENNEDY/JENKS CONSULTANTS

1.0 INTRODUCTION

The Douglas Aircraft Company (DAC) C-6 Facility is located at 19503 South Normandie Avenue, Torrance, California (Figure 1). Quarterly groundwater sampling is being conducted in response to the California Regional Water Quality Control Board - Los Angeles Region correspondence to DAC, dated 7 April 1992. This report summarizes laboratory analytical data generated through the chemical analysis of groundwater samples collected during the period of 8 and 9 September 1994, Third Quarter 1994.

2.0 QUARTERLY MONITORING PROGRAM

Third Quarter 1994 groundwater sampling was performed in accordance with standard sampling procedures. Static water level depths were measured on 8 September 1994 prior to initiating purging of groundwater from any observation wells. The static water depth of monitoring well WCC-6S was not measured due to wellhead obstructions. Static water depths on monitoring wells (MW-9, MW-18 and MW-19) located in the southern portion of the DAC property installed for the Montrose Chemical Corporation Remedial Investigation were not measured for this quarter.

Groundwater samples were collected from the following fourteen wells (Figure 2) and chemically analyzed for volatile organic compounds (VOCs) by EPA Method 8240/8260 for the Third Quarter 1994.

WCC-1S, WCC-2S, WCC-3S, WCC-4S, WCC-5S, WCC-7S, WCC-8S, WCC-9S, WCC-10S, WCC-11S, WCC-12S, WCC-1D, WCC-3D, and DAC-P1.

Table 1 summarizes observation well construction details. Tables 2 and 3 summarize the results of chemical analysis of groundwater samples and duplicates for major and minor constituents at the C-6 facility, respectively. Chemicals detected in samples from each observation well are shown in Figure 3. Table 4 summarizes available measured groundwater elevations to date. Estimated groundwater elevation contours for the Third Quarter are presented in Figure 4. Historical chemical concentration profiles for the indicator chemicals trichloroethene and 1,1-dichloroethene are shown in Figure 5. Copies of laboratory data sheets, laboratory/field Quality Control data sheets, groundwater purge and sample forms, and Chain-of-Custody records are included in Appendices A, B, C, and D respectively.

2.1 Groundwater Sampling Procedures

Prior to collecting groundwater samples from each well, groundwater was purged using an electrical submersible pump that was temporarily installed in the observation well. Observation well WCC-1S was purged with a bailer since the 2-inch casing size would not accommodate a pump. After lowering the pump to the approximate mid-point of the saturated well screen, approximately three to five

wetted casing volumes of groundwater were purged from the well until the following groundwater monitoring parameters had stabilized to within 10% of preceding values: pH, electrical conductivity, temperature and clarity. Purged groundwater was stored onsite in DOT approved 55 gallon barrels pending the results of laboratory analysis of samples.

Following groundwater purging, the submersible pump was removed from the well and a representative groundwater sample was collected using a steam-cleaned stainless steel point-source bailer equipped with top and bottom ball-check valves. The bailer was lowered to the approximate mid-point of the saturated well screen interval and retrieved to ground surface. The contents of the bailer were drained into four labelled 40-ml capacity vials, preserved with HCl.

2.2 Field QA/QC Procedures

Duplicate groundwater samples were collected for the sampling rounds on 8 and 9 September 1994 for quality control purposes. The duplicates were collected in four HCl-preserved vials each and identified by inserting the collection date after "DW-" (DW-090894 and DW-090994). No further sample identification was provided to the laboratory. Samples DW-090894 and DW-090994 were taken from observation wells WCC-11S and WCC-3S, respectively.

Following decontamination of the bailer by steam-cleaning, and prior to collection of groundwater samples from the successive well, equipment rinsate blanks were prepared for laboratory analysis. The equipment rinsate blanks were prepared by pouring Reagent Grade II water, prepared by the analytical laboratory, through the bailer and discharge spigot and collecting the rinsate in one 40-ml vial preserved with HCl. The blanks were identified following a similar protocol to that used for duplicate water samples and are identified as "FB-090894" and "FB-090994". The wells sampled before and after rinsate blank preparation were recorded. FB-090894 was collected after sampling WCC-7S, the last well sampled that day. FB-090994 was collected after sampling well DAC P-1, the last well sampled that day. Trip blanks were also analyzed for both days of sampling and shipping and are identified as TB-090894 and TB-090994.

All groundwater duplicate and field blank samples were transported in ice-cooled chests to Terra Tech Labs, Inc., Irvine, California using U.S. EPA-recommended Chain-of-Custody procedures.

3.0 EVALUATION OF ANALYTICAL RESULTS

3.1 Groundwater Gradient

Groundwater levels were measured prior to sampling on 8 September 1994 (Table 4 and Appendix C). The groundwater elevations over the C-6 facility range from 16.58 feet below mean sea level (MSL) to 19.08 feet below MSL. An estimated potentiometric surface map for the shallow zone as measured on this day is

presented as Figure 4. Water level measurements show little change over the DAC C-6 facility since the June 1994 quarterly monitoring, with the exception of a drop in water levels at WCC-9S. Continued quarterly monitoring will allow for assessment of this variation. The groundwater gradient in the shallow zone was generally south-southeast with a southerly directed trough-like depression between observation wells WCC-10S and WCC-12S.

Insufficient data (two wells) are available to define the groundwater gradient in the deeper zone. Groundwater elevation in the two wells (WCC-1D and WCC-3D) is approximately 17.66 and 17.47 feet below MSL, respectively.

3.2 Analytical Data

The results of chemical analysis of groundwater and duplicate samples are summarized in Tables 2 and 3. Table 2 lists major constituents and Table 3 lists additional minor constituents of samples tested. The duplicate groundwater samples are indicated by an asterisk and are presented with the "original" groundwater samples. These tables include cumulative analytical data for all monitoring wells and detection limits (where available) for the listed chemicals.

The following observations are noted:

- WCC-6S was not sampled due to construction activity since the June sampling event that resulted in obstruction of the well casing box. Efforts to remove the obstruction are planned so that sampling of this well can be resumed in the fourth quarter 1994.
- Data for groundwater samples collected from well DAC-P1, located at the upgradient property boundary, indicate a TCE concentration of 18,000 micrograms per liter ($\mu\text{g}/\text{L}$) coming onto DAC's property. This test result is consistent with prior sampling events. DAC-P1 is screened in the shallow zone.
- Background concentrations of TCE and 1,1-DCE in the shallow zone upgradient or cross gradient wells WCC-10S, WCC-2S, and WCC-11S remain in the range of 100 $\mu\text{g}/\text{L}$ of TCE and tens of $\mu\text{g}/\text{L}$ of 1,1-DCE.
- Groundwater elevation data (Figure 4) and chemical concentration data (Figure 3) indicate that chemical transport in the shallow zone is in a generally southerly to southeasterly direction in the vicinity of buildings 36 and 41. Chemical concentration data from the eastern boundary observation wells (WCC-5S, and WCC-9S) are within the same range or lower than upgradient or cross gradient "background level" wells (WCC-10S, WCC-2S and WCC-11S).

- WCC-3S showed significant decreases in several chemicals over the previous two quarters, specifically 1,1-DCE, 1,1,1-TCA, TCE MIBK and Toluene. Sample data from this quarter do not show a trend toward decreasing concentrations.
- WCC-3D showed elevated levels of several chemicals over the past three quarters, specifically 1,1-DCE, 1,1,1-TCA, and TCE. Historical data indicate fluctuating concentrations with overall increase to date.
- WCC-8S sample data indicate increasing DCE concentrations since August 1993 over historical ranges.
- Chemical concentration variances within all observation wells (other than WCC-3D discussed above) were within historical ranges.
- Analytical data from the equipment rinsate blanks, sample duplicates, trip blanks, and laboratory spikes and duplicates are indicative of reliable data.

MW-19 ⁶	46.55	NA	NA	NA	NA	NA

notes:

- 1. Reference point is north side, top of well casing
- 2. Reference point elevation measured by Hergis + Associates, Inc.
- 3. Data taken from Woodward-Clyde Consultants Phase II Report, May 1988.
- 4. Data taken from Woodward-Clyde Consultants Phase III Report, March 1990.
- 5. N/A - Not Available - No access to offsite wells.
- 6. Installed by Hergis + Associates, Inc. for Montrose Chemical Corporation Water Level Elevation not measured due to wellhead obstructions.

Project Address: N/A Date Received: 9/8/94
Date Analyzed: 9/19/94-9/20/94
Physical State: Liquid

Quality Assurance/Quality Control Summary

Parameter (Method)	QC Type	MS	MSD	Relative		
		Percent Recovery	Percent Recovery	Acceptable Range	Percent Difference	Acceptable Range
1,1, Dichloroethene (EPA 8240/8260)	M	95	108	50-127	13	0-22
Benzene (EPA 8240/8260)	M	103	106	64-137	3	0-15
Trichloroethene (EPA 8240/8260)	M	124*	122*	80-121	2	0-15
Toluene (EPA 8240/8260)	M	104	109	82-118	5	0-12
Chlorobenzene (EPA 8240/8260)	M	97	99	85-119	2	0-12

*MS/MSD recoveries were not within acceptable QC limits due to possible matrix effect; LCS was within acceptable limits.

M = Matrix Spike / Matrix Spike Duplicate

L = Laboratory Control Sample Spike / Spike Duplicate

Reviewed

Approved

The samples were received by Terra Tech Labs, Inc. in a chilled state, intact and accompanied by the Chain-of-Custody Record.

Acceptance of samples by Terra Tech Labs, Inc. is not an indication or condition upon receipt.

Laboratory Results apply only to the sample matrix analyzed and may not apply to an apparently identical or similar sample.

The Laboratory Report is the property of the client to whom it is addressed.

The Laboratory Results are only a portion of the Laboratory Report.
